Residence Recycling FAQ - Résidence Saint-Jean (RSJ)

**HOW** How do you recycle properly?

The recycling system at Résidence Saint-Jean has four streams: recyclables, organics, beverage containers, and waste.

**Recyclables**
Collect your recyclables in your room and then bring them to the blue bin in the loading dock.

**Organics**
There are two brown organics pails provided for you in each kitchen. Organics can go right into the pail, just make sure to follow the emptying schedule posted in the kitchens and wash the bins out regularly.

**Beverage containers**
You have two options:
1) Collect them and bring them to a local Bottle Depot for a refund
2) Collect them and bring them to the beverage container bin in one of the common areas.

**Waste**
Put the rest of your waste in a bag and place it directly into the waste bin in the loading dock.

For more information on recycling in residence, visit: residence.ualberta.ca/CurrentResidents/Sustainability

**WHAT** What can you recycle?

At Résidence Saint-Jean, you can recycle beverage containers, paper and cardboard, glass and light metals, plastics, and compost organics.

Please help us reach our goal of keeping 50 per cent of UAlberta’s waste out of the landfill by 2015.
Where are the recycling bins located?

The large, blue single stream recycling bin and large, green bins for waste are located inside the RSJ loading dock.

Beverage container recycling bins are located in the common areas of RSJ and Campus Saint Jean.

The 8’ x 8’ plywood organics bin is located outside next to the community garden.

What do you need in order to recycle properly?

It’s simple! All you need is a small container to collect your recyclables, and some garbage bags. Your room is supplied with a brown pail for organics and a waste bin.

Where do the recyclables and waste go after you put them in the bin?

Recyclables are picked up by a contracted hauler and brought to a materials recovery facility where they are further sorted for recycling.

Beverage containers are taken in to a Bottle Depot for a refund. The money goes back into the program.

Organics and soil are mixed together in the plywood bin and once composted are placed in the community garden to add nutrition to the soil.

Waste is collected by our contracted waste hauler and brought to a contracted landfill.
